

## SEPARPLAST

**Separplast** is used to separate the light contaminants like plastics, polystyrene, hot melts etc. The stock is fed through a level box and enters the equipments from the top and passes through the rotor and basket. As a result the stock is deflaked and cleaned leaving the rejects to fall down after being washed by flushing water, thus reducing the fibers.

### Salient Features:

- Effective removal of plastics, polystyrene, hot melts and others.
- Main body is constructed of MS with SS lining.
- Rotor is made of Stainless Steel.
- Screen is made of Stainless Steel with taper holes.
- Heavy duty bearing with CI pulley.
- Economic in cost.
- Models are available according to capacity in TPD.
